

Rebar

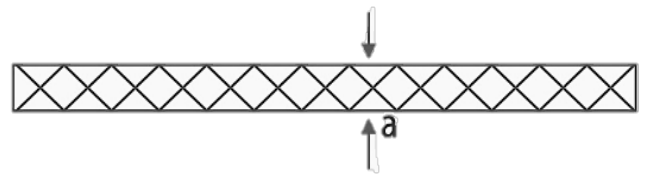

Corrugated steel / Reinforcing Bar

Product number 721420

Specifically manufactured for use as concrete reinforcement. The surface of the bar is provided with ribs or protrusions known as deformations, which prevent longitudinal slippage between the bar and the surrounding concrete.

This product complies with industry standards for mechanical strength, dimensional tolerances, and surface geometry, making it ideal for use in slabs, beams, columns, footings, and all types of reinforced concrete construction.

Key features:

- High tensile strength and ductility
- Excellent adhesion to concrete
- Available in multiple diameters and lengths
- Manufactured according to [ASTM A615 / NMX-B-506]

Technical chart

	CALIBER		WEIGHT		AREA	
	Inches	MM	kg/m	Lb/m	mm2	mm
3	3/8	9.5	0.56	0.38	71	29.8
